PROFILE

I build software and AI automations, combining full-stack engineering with experience in accounting and consulting environments. I also offer practical AI training and digital adoption support for individuals and teams.

SELECTED EXPERIENCE

Fairvalue Management Consultancy and Chartered Accountants

Experience across IT management, software and systems delivery, audit data analysis, cloud migration, security, internal operations and automation.

Independent product and client work

Full-stack product development spanning financial tools, transport intelligence, indoor navigation and client storefronts. Work covers problem definition, interface design, implementation and workflow testing.

SELECTED PROJECTS

Svika: Transport and trip intelligence product.

Muripi: Indoor navigation across web and Android. Physical route validation remains a separate release gate.

Taku Payroll: Payroll software with local data and automation. Release readiness remains in progress.

Client storefronts: Product discovery and enquiry interfaces, including Bushkin and Taku-cake.

TECHNICAL SKILLS

TypeScript, React, Next.js, Node.js, Python, FastAPI, PostgreSQL, Supabase, Convex, Tauri and Rust. AI automation, retrieval-augmented generation and local language-model workflows. Practical work with Codex, Claude and Perplexity.

EDUCATION AND RECOGNITION

BSc Computer Information Systems (Honours)

Near East University, Cyprus | 2020 | GPA 3.25

Google AI Professional Certificate | March 2026

Verify credential: FZSTEM28BXNS

GDG Harare Build with AI 2026 hackathon winner

Recorded in my professional portfolio.
